

One place to read what state medical boards are discussing

State medical and osteopathic boards publish their meeting minutes as PDFs scattered across dozens of separate websites — some clean text, some scanned paper. **boardpulse** is a working prototype that gathers those public documents into one library, summarizes every meeting with AI, and makes a year of national board activity searchable from a single dashboard.

From the national dashboard: the coverage map and topic intelligence panel. The full dashboard adds per-board pages, meeting pages with the source PDFs, and full-text search.

WHO

Built by **Frank Meyers** (Regulatory Innovation & Member Services) as an internal research prototype. It monitors the public meeting records of **63 state medical and osteopathic boards** and is written for colleagues who follow licensing, discipline, and policy trends.

WHERE

Sources are the boards' own public websites; **every document in the system is a public record**. The database and dashboard run on a single local workstation — this is not a public website or a hosted service.

WHAT

A searchable library of board agendas and minutes: the **original PDFs**, an **AI summary of each meeting**, a **12-month narrative per board**, a cited **national landscape report**, and full-text search. Fifteen recurring topics are tagged — licensing, telehealth, disciplinary process, AI, and more.

WHEN

Refreshed automatically on the **first of each month**, with on-demand refreshes anytime. Summaries cover a rolling **12-month window** while the document library reaches back to **2021** for trend analysis; every page shows when its data was last collected.

HOW From board website to dashboard in five steps

1

Discover
Find each board's meeting-minutes page on its official website.

2

Collect
Download the original agendas and minutes; every file is checked before it goes in the library.

3

Extract
Pull the text from each PDF; scanned paper documents are transcribed page by page.

4

Summarize
AI writes a summary per meeting and per board under strict rules: only what the document says, with every claim cited.

5

Verify
An automated audit checks dates, names, and citations before anything reaches the dashboard.

USES Four things it does well

- **Search everything at once.** One search box covers the full text of every collected document — a term, a drug name, a statute.
- **Read a board's year in minutes.** Each board has a 500-word narrative of its last 12 months, linked into each meeting.
- **Follow a topic nationally.** Open a topic like AI or telehealth and see which boards discussed it and what each one said.
- **Start from the synthesis.** The national landscape report reads across 57 boards, with citations back to the source minutes.

GUARDRAILS How the AI is kept honest

- ✓ Summaries may use **only what appears in the source document** — nothing is added from outside knowledge.
- ✓ **Every dated claim links to the source PDF**, which stays one click away as the authoritative record.
- ✓ A built-in check **rejects any summary of a meeting that has no underlying document text** before it reaches the dashboard.
- ✓ After every refresh, a separate audit checks for **date mismatches, cross-board mix-ups, and broken citations**.
- ✓ Meetings with no readable text **show no summary at all** — an honest blank, not a guess.

WHAT IT IS	WHAT IT IS NOT
• A research aid for reading public board records faster • A descriptive record of what boards discussed, in their own documents' words • An internal prototype — a working example of what this approach can do	• Not an official record — the linked source PDF is always the record • Not an assessment, ranking, or evaluation of any board's practices • Not a public product or a hosted service

STATUS By the numbers (as of July 2, 2026)

Coverage	61 of 63 boards have documents on file — including several recovered by hand from bot-walled sites and internet archives. The remaining two (Kentucky and West Virginia's osteopathic board) publish no minutes anywhere online; an open-records request is the path to theirs
Library	1,933 meetings · 2,677 documents · 2,567 with searchable text, reaching back to June 2021 (including West Virginia and Virginia minutes transcribed by AI from scans)
Summaries	501 per-meeting summaries · 57 board 12-month narratives · one national landscape report across 57 boards
Cadence	Automatic refresh on the 1st of each month; any board can be updated on demand

District of Columbia Board of Medicine

29 MEETINGS TRACKED SINCE JANUARY 2023 16 BILLS FOLLOWED 10 RULE ACTIONS

This is the picture boardpulse builds for a single board — pulled automatically from its own meeting minutes, then organized so a reader can see the board's agenda at a glance. Everything below traces back to a source document.

WHAT THEY'VE FOCUSED ON

Workforce	4 meetings
Licensing	4 meetings
Legislation	3 meetings
Rulemaking	2 meetings
Public health	2 meetings

RULES IN MOTION

- COMMENT** Self-administered hormonal contraceptive prescription (17 DCMR 6517)
- EFFECTIVE** Pharmacist prescribing protocol — joint Board of Medicine / Board of Pharmacy
- EFFECTIVE** Pre-licensure practice by postgraduate physicians (17 DCMR 4611)
- TABLED** Physician-assistant licensure reciprocity with Virginia and Maryland

ON THE HORIZON — FIRST MENTIONS

- NEW** Artificial intelligence in healthcare regulation. The Board Chair noted an upcoming FSMB symposium on AI in the practice of medicine.
 - NEW** Physician workforce, wellness & burnout. The Primary Care Office previewed a workforce initiative addressing burnout.
- Emerging-topic detection flags the first time a board raises something new — an early signal of where the conversation is heading.

BILLS THEY'RE WATCHING

- Health Occupations Revision Act rewrite (B25-0545) — a broad revision of the DC health-professions code
- Licensing-board residency requirement (B25-0312) — raised across four meetings
- Reproductive health care protections for providers (B24-0830)
- Prior authorization reform (B25-0124) · Medical cannabis self-certification (B24-0113)

What the record shows. Across 2023–2025 the DC Board of Medicine managed steady leadership turnover while its substantive agenda centered on workforce and modernizing who may practice and how — expanded pharmacist and postgraduate practice authority, cross-border PA licensure, and a full rewrite of the Health Occupations Revision Act. Reproductive-health rulemaking and artificial-intelligence questions have entered the conversation. Every item above links to the meeting where it appears; this page is descriptive — it reports what the minutes record, not a judgment of the board.
